FileMaker Server 11 is required when you need to connect more than nine concurrent connections to HearForm software. There are other reasons that we recommend that you consider hosting HearForm on FileMaker Server 11 software.

When you host HearForm software on FileMaker PRO software, the host of the file needs to always have HearForm OPEN on their computer. That staff member is also responsible for making sure that HearForm is backed up routinely.

FileMaker Server software runs HearForm in the background (as a service.) There is no need to OPEN or CLOSE HearForm. Back-ups are scheduled to run automatically and can be automated to back-up to your free www.dropbox.com account on the internet.

Hosting HearForm on FileMaker Server 11 is also FASTER and more STABLE. We still recommend that your host computer be hooked up to an *uninterruptible power supply* or UPS.

Top 8 Reasons to Use FileMaker Server 11

1 Manage databases remotely from any computer on the network.

2 Schedule automatic backups for data protection.

3 Automate administrative tasks with the Admin Console.

4 Receive email notifications of errors or completed maintenance activities.

5 Share with larger groups of users compared to peer-to-peer sharing.*

6 Centralize your live external SQL connections.

7 Secure data transfers with SSL encryption.

8 Manage user access through external authentication via Active Directory/Open Directory.

"FileMaker has just the right mix of design and data-management features for developing small-business applications."

PC Magazine review

"Even for small numbers of users, FileMaker Server is the preferred way to go, and the installation and set-up is much easier to negotiate."

Macworld review

"FileMaker claims you can have FileMaker Server installed and running in 20 minutes. It took us about eight."

MacLife review

Easy installation and administration

Install FileMaker Server 11 in just 20 minutes or less. Manage your databases remotely and automate administrative tasks.

24/7 reliability and availability

Get access anytime to your data with 24/7 availability. Protect your data with scheduled live back-ups, which run even while your databases are in use.

Robust scalability

Connect up to 250 FileMaker Pro licensed users by adding FileMaker Server 11. Plus get greater security and network performance.

Industry-standard security

Manage user access through external authentication via Active Directory/Open Directory. Use SSL encryption for secure data transfer.

Custom Web Publishing

Optionally, create custom, data-driven websites using PHP or XML/XSLT. Use the PHP Site Assistant for step-by-step help in creating PHP websites.

HearForm Software, LLC, 2011

FileMaker Server 11 is certified as fully functional in the following hardware and software environments:

Windows Server 2003 Standard Edition SP2, Windows Server 2008 Standard Edition SP2, Windows 7 Professional Edition

- Pentium IV 3.4 GHz or higher

- CPU: Core Duo, CPU: Dual CPU Recommended

- 2 GB of RAM, 4 GB Recommended

- 80+ GB HD

Mac OS X and Mac OS X Server version 10.6 (Intel-based Mac)

- CPU: Core Duo, CPU: Dual CPU Recommended

- 4 GB of RAM, 8 GB Recommended

- 80+ GB HD

Notes

- FileMaker Server 11 supports FileMaker Pro 7, 8, 8.5, 9, 10, and 11 clients.

- IMPORTANT: If the FileMaker Pro solution uses features specific to newer versions (e.g. Charting in FileMaker Pro 11), those features will not be visible when using older clients.

- If a hosted database uses server-side plug-ins or if you want to automatically update client- side plug-ins, then you must place the plug-ins on FileMaker Server also.

- You cannot use peer-to-peer database hosting in FileMaker Pro on the same computer that FileMaker Server is running on.

- As FileMaker Server opens files that were not closed properly or have not been opened in a FileMaker Pro 8 or later product, FileMaker Server performs a consistency check on each file and logs the result of the check in the event log.

- Up to 125 FileMaker Pro database files can be hosted on FileMaker Server and automatically opened when FileMaker Server starts.
