Software

FileMaker Pro & Windows 7 / Vista

Does FileMaker Pro 11 work with Windows 7 and Windows Vista?

Yes. Please see the following requirements.

- FileMaker Pro 11 Windows (3/10) - Windows 7 Ultimate, Professional, Home Premium*

- FileMaker Pro 11 Windows (3/10) - Windows Vista Ultimate, Business, Home Premium (SP 2)

- FileMaker Pro 11 Windows (3/10) - Windows XP Professional, Home Edition (Service Pack 3)*

- FileMaker Pro 11 Macintosh (3/10) - Mac OS X 10.6,or Mac OS X 10.5.7*

* Version stated is the minimum requirement. The software may also work with later versions certified by FileMaker, Inc

Windows 7 and FileMaker 10 products

Review the matrix below to determine if your product is compatible with the new operating system.

Product	Compatible with *Windows 7*	Known Issues
FileMaker Pro 10	Yes	Yes
FileMaker Server 10	No	No

The following is a known issue when running FileMaker Pro 10 with Windows 7:

FileMaker Pro 10

- Opened file names are not added to the Recent list
- Scrolling long scripts may cause FileMaker Pro to quit.

Earlier versions of FileMaker (FileMaker Pro 8.5 and 9) have not been tested or certified with *Windows 7*. These products were developed and released before *Windows 7* became available.

While these earlier versions may install and run on *Windows 7*, you may encounter installation and stability issues for which there is no resolution. FileMaker, Inc, strongly recommends that you use current FileMaker software.

Note: HearForm users have made no complaints to us regarding the use of FileMaker Pro 8.5 or 9 on Windows 7 machines.

FileMaker Pro has not been tested on Windows XP, Windows Vista, Windows 7 64 bit Edition.

FileMaker, Inc. does not officially support the products listed on a 64-bit Windows platform.

FileMaker is a 32-bit application, and will only run on 64-bit machines in a 32-bit compatibility mode. FileMaker runs as a 32 bit app on a 64 bit machine, the same way the majority of app's still do on windows.

If you take a look at your task manager (ctrl + shift + esc) you might be surprised to see how many apps on your machine are running as 32 bit (including those from Microsoft).

We can't speak for FileMaker, Inc., but we have many customers on Vista 64 and on Win7 64 without any issues.

The following link represents the revision and release history for FileMaker Pro. It contains product version, system requirements, platform, and release date. To view information on each version click the blue link to access the product read me file.
